

## Manufacturing / Test Engineer

Energate Inc. ([www.energateinc.com](http://www.energateinc.com)) is a fast-growing, Ottawa-based technology company that is developing and delivering home energy management controls, systems, and services that have the flexibility and features demanded by growing global markets. Energate is currently looking for a Manufacturing / Test Engineer who believes in excellence and sustainability, believes that integrity and respect of others is critical to success, and is looking for growth opportunities.

**Title:** Manufacturing / Test Engineer  
**Department:** Operations  
**Reporting to:** VP Operations  
**Location:** Ottawa, Ontario, Canada  
**Travel:** Some travel required

**General Description:** This position is responsible for supporting Manufacturing and Supply Chain functions through our Contract Manufacturing partners. Including responsible for development and support of test platforms, component engineering and overall manufacturing operations.

### Main Job Tasks and Responsibilities

- Prime interface with our Contract Manufacturing partners to develop, implement and support all testing platforms
- Work with Engineering, Operations and our CM's to streamline testing & manufacturing processes and procedures to ensure the highest levels of quality are maintained and reduce overall product costs
- Lead design for Test / Manufacturability in our Gate Process
- Interface with solutions partners regarding integration with Energate's solutions
- Provide component engineering support for all products
- Manage and control all manufacturing documentation (revision control, updates, new releases, etc.)
- Develop and maintain AVL (approved vendor listing) for all materials and products

### Minimum Qualifications

- University Degree in Engineering. P Eng. Designation preferred.
- Experience in electronic product testing development and support
- Experience in Product Gate Processes and Design for Test / Manufacturability
- Proficiency in reading and following engineering schematics, drawing, instructions, etc.
- Experience in supporting and interfacing with Electronic Contract Manufacturers
- Experience with China based manufacturing, quality processes and procedures, as well as security experience would be a desirable asset.
- Strong organizational and communication skills
- Minimum of 5 years experience
- Proven experience in working with high performance teams
